Replanting Completed at Aupe Culvert

Current Environmental Ltd technicians Madeleine Guimond and Jeremiah Bain were on-site at the new Aupe Culvert on Tuesday April 14th with Guardians Craig and Marselis. The team was working together to install 95 plants and 30 live stakes to help restore the vegetation at the construction site. These plants will contribute to expand the habitat in the area, and help with erosion control on the slopes near the culvert.

The team installed a variety of native plants, including willow, dogwood, salmonberry, twinberry, ninebark, currant, spruce, hemlock, maple, and sword fern.

Meet Madeleine and Jeremiah!

Born and raised in the Comox Valley, Madeleine has always had a deep passion for the outdoors, which has profoundly influenced her academic and personal pursuits.

Madeleine recently graduated from the University of Victoria with a BSc in Biology specializing in forest ecology and is the newest part of the Current Environmetal team. Her education was complemented by field experience gained through volunteering with various stream keeping groups and other environmental non-profits on Vancouver Island.

In her leisure time, she can often be found looking for new plants, playing the fiddle and exploring her backyard from the alpine to the sea.

Jeremiah is an environmental technician with a strong passion for the natural world and environmental stewardship. He has worked extensively throughout BC and Alberta treating complex eroding coastal slopes, landslide areas, drastically disturbed sites, and riparian areas with soil bioengineering and ecological restoration techniques. Jeremiah also has experience with riparian assessments, GIS, environmental monitoring, erosion and sediment control, and invasive species management. In his free time Jeremiah enjoys hiking, canoeing, camping and mountain biking.
